# Introducing AEGIC eLearning

High quality, accessible online  
training for flour mill employees

Department of  
Primary Industries and  
Regional Development

AEGIC is an initiative of the Western Australian State Government and Grains Australia.

AEGIC's eLearning platform can help Indonesian flour mills develop the skills of employees through comprehensive and accessible online training.

Developed by AEGIC in partnership with Grains Australia and IA-CEPA Katalis, this training is designed to upskill workers and enhance efficiency in Indonesia's rapidly growing flour milling industry.

## What benefits does the AEGIC eLearning platform provide?

AEGIC's eLearning platform supports the internal training offered by flour mills by providing employees with a solid foundation of up-to-date technical knowledge of the entire milling process.

The training will drive better performance within the Indonesian milling industry, making companies more globally competitive and more able to support flour and flour-based food exports.

An efficient and informed Indonesian milling industry will be better able to extract value from Australian grain through higher flour extraction rates, leading to improved flour mill profitability.

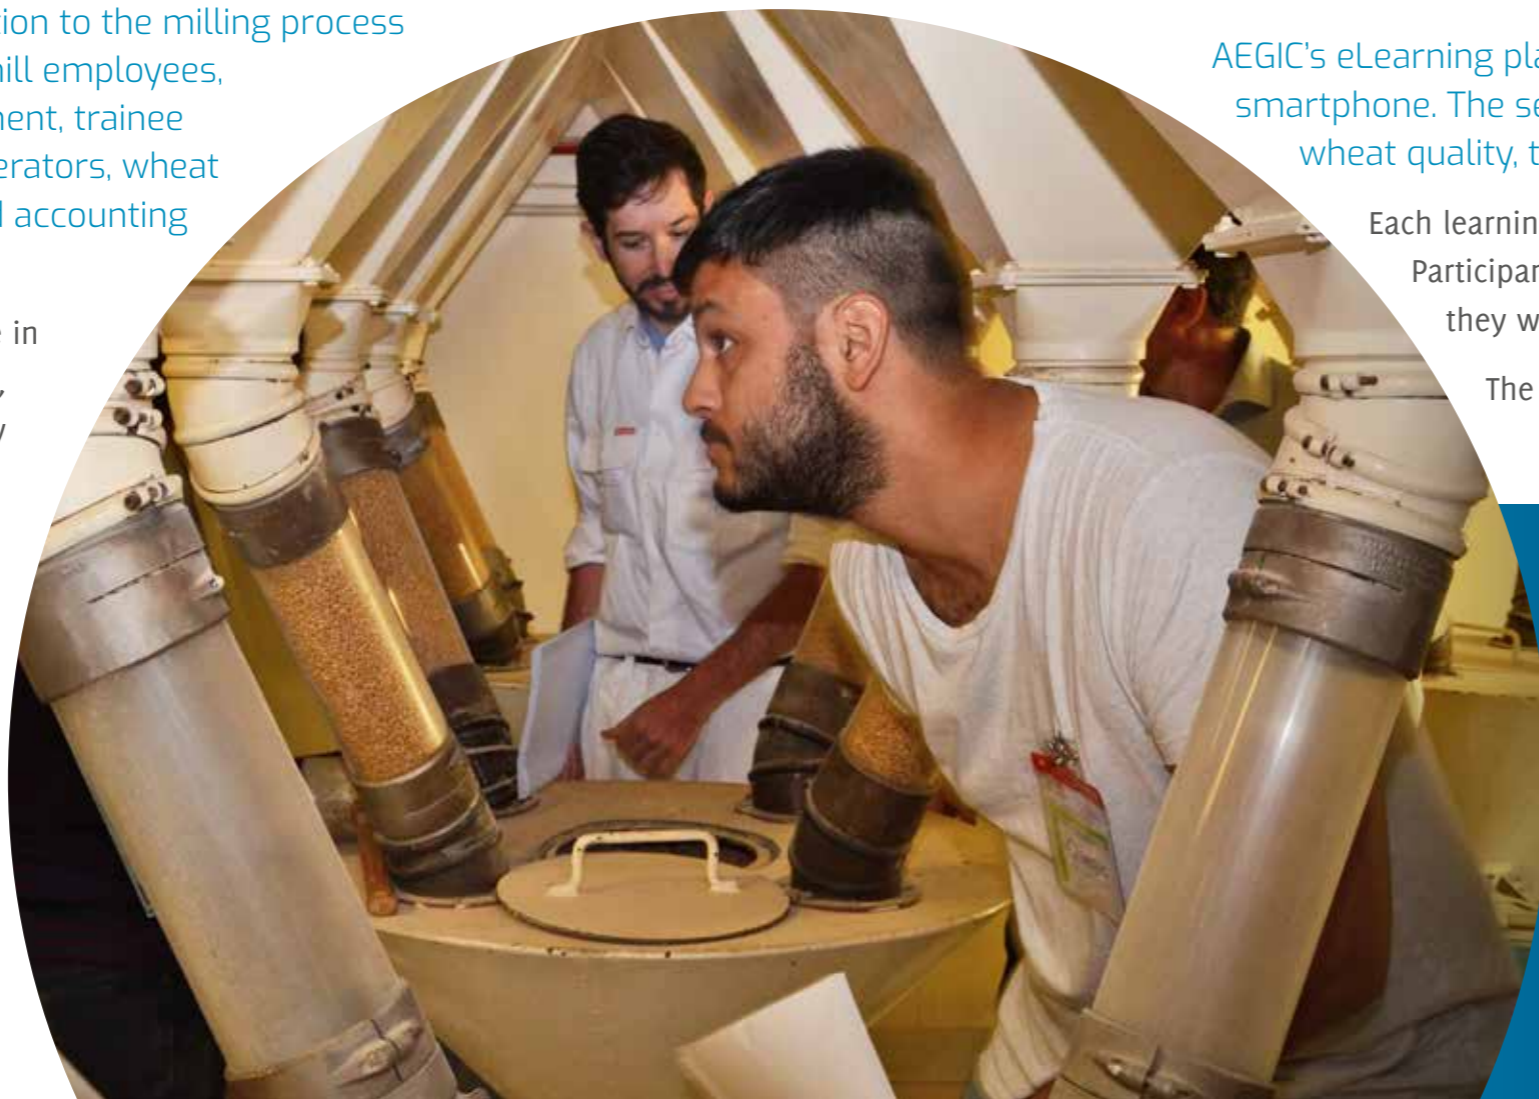

## Who is the AEGIC eLearning platform for?

This course is an introduction to the milling process and will benefit all flour mill employees, including senior management, trainee millers, quality control operators, wheat purchasing managers, and accounting and finance workers.

Course materials are available in English and Bahasa Indonesia, and are designed to be widely accessible, regardless of gender or educational background.

Flour mills can be spread over multiple sites. AEGIC's eLearning platform overcomes distance and the need for time away from work.

## How does it work?

AEGIC's eLearning platform is an online training platform, accessible on PC or smartphone. The self-paced training consists of a series of modules covering wheat quality, the milling process and other mill operations.

Each learning module contains a 10-minute video, followed by a short assessment. Participants can complete the course online, at their own pace, when and where they want to.

The course is currently free of charge.

At the end of the course, participants complete a longer assessment and receive an AEGIC Certificate of Flour Milling.

Records of participant training are maintained on the eLearning platform and can be used by milling companies to support ISO certification or as staff development records.

## How do I access AEGIC's eLearning platform?

For more information about the training including how to get involved, please contact AEGIC or scan the QR code for more information. [aegic.org.au/elearning](http://aegic.org.au/elearning)

This project is delivered by AEGIC, through investment from Grains Australia and IA-CEPA Katalis

## Increasing the value of Australian grains

The Australian Export Grains Innovation Centre (AEGIC) is an independent organisation that helps position Australian grain as the preferred choice in international markets.

### AEGIC delivers value by:

- **Understanding** the needs of grain customers.
- **Identifying** and supporting grain market opportunities.
- **Educating** customers on the benefits of Australian grain.
- **Innovating** to develop new solutions and high-value uses.

This helps the Australian grains industry breed, classify, grow and supply grain that markets prefer.

AEGIC's primary beneficiaries are Australian grain growers, but the impact of AEGIC's work spans the whole grains supply chain...

from the grower in Australia, whose grain is valued internationally

to the consumer across the world

who enjoys excellent noodles, baked products and beer made from Australian grain.

More information about the work AEGIC is doing can be found at [aegic.org.au](http://aegic.org.au)
